

faroes

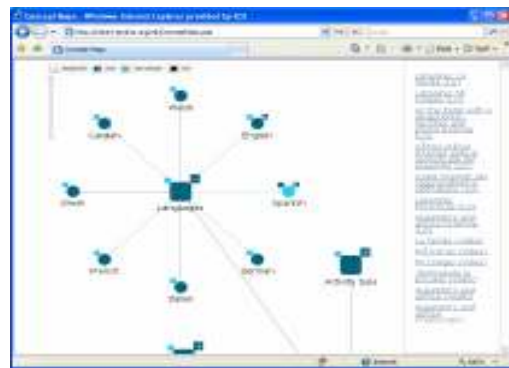

Faroes will deliver a lightweight Web 2.0 style repository that allows teachers to easily share their resources. The goal is to begin to explore the difficult issues of *authorship*, *provenance*, *authority* and *copyright* in the context of a real system with real users.

<http://www.faroes.ecs.soton.ac.uk/>

Faroes* is the follow on project to **Claret**; both projects are based on the **Clare** repository (a version of **ePrints**) and both have worked with the language teaching community in the UK.

Faroes will:

- create a **lightweight, simple repository** that replicates the best-practice openness and user experience seen in commercial Web 2.0 sites such as Flickr or YouTube.
- engage with the **language teaching community** to support them in creating and sharing their digital resources.
- develop technologies to create a **single searchable space** over several repositories
- explore how tags might evolve into **folksonomies to aid in navigation**
- investigate how **structured feedback** might support learning resources over a lifetime of shared usage

* Faroes is based at the University of Southampton and the University of Portsmouth
